Groups on Russia Progress Report

Rafael Campos-Gottardo & Alan Nemirovski

2026-03-10

Long-term measure

Long-term measure centered on dichotomous question for trade with Russia (Pro-Russia) or defence against Russia (Pro-Ukraine); all outstanding respondents tentatively classed as "Other".

```
EUI_data <- EUI_data %>%
  mutate(ukrainegroups_long = case_when(
    #classed as Pro-Russia
    Q73 == "European countries should invest more in trade and diplomacy with Russia to improve relatio
    #classed as Pro-Ukraine
    Q73 == "European countries should invest more in defence and security to defend against Russian agg
                                       TRUE ~ "Other"))

Situational Pro-Russian

Longterm measure (threat)

This is a long-term to distinguish situational pro-Russians from ideological pro-Russians considering those who see Russia as their country's and want to invest in diplomacy with Russia as situationally pro-Russian.

```
EUI_data <- EUI_data %>%
  mutate(Types_pro_Russia_long = case_when(
    #classed as Pro-Russia
    Q73 == "European countries should invest more in trade and diplomacy with Russia to improve relatio
    & Q68 == 2 ~ "Situationally Pro-Russian",
    Q73 == "European countries should invest more in trade and diplomacy with Russia to improve relatio
    #classed as Pro-Ukraine
    Q73 == "European countries should invest more in defence and security to defend against Russian agg
                                   TRUE ~ "Other"))

table(EUI_data$Types_pro_Russia_long)
```

```
##
## Ideologically Pro-Russian                     Other                Pro-Ukraine
##                     44517                     48183                      63338
## Situationally Pro-Russian
##                      7086
```

Long-term measure (greatest issue)

Those who think that Europe should invest in trade and diplomacy with Russian and consider war or energy their country's biggest issue are classified as situationally pro-Russian.

```
EUI_data <- EUI_data %>%
  mutate(pro_Russia_long_issues = case_when(
    #classed as Pro-Ukraine
        Q73 == "European countries should invest more in defence and security to defend against Russian
        | Q47a_8 == 1 ~ "Pro-Ukraine",
        #classed as situationally pro-Russian
    Q73 == "European countries should invest more in trade and diplomacy with Russia to improve relatio
    & (Q7_6 == 1 | Q7_12 == 1) ~ "Situationally Pro-Russian",
    # classes as Ideologically Pro-Russian
    Q73 == "European countries should invest more in trade and diplomacy with Russia to improve relatio

                                   TRUE ~ "Other"))

## Situationally Pro-Russian
##                      7055
```

Long-Term measure (defence)

This measure produces the largest situationally pro-Russian group. Respondents are classified as situationally pro-Russian if they think European countries should invest in trade and diplomacy with Russia AND think Russia is their country's greatest threat OR If they think their country should send troops to support Latvia, Romania, Finland, or Greenland but not Ukraine.

```
EUI_data <- EUI_data %>%

New Questions

Dietlind and Maria

Two more questions we worked on: According to you, what do you perceive Russia's goals to be. Click all that apply. –Take all of Ukraine's territory –Attempting to retake the old Soviet Republics (Latvia, Lithuania etc.) –Attempting to retake All of Eastern Europe, e.g. Poland, Romania, Bulgaria –Attacking Europea countries (e.g. France, Germany) –Russia is a peaceful country and does not desire to take or retake any countries or territories. –OR: Russia is a good country that is getting a bad reputation.

If another country would attack Sweden, would you support Sweden to fight in a war to defend itself. Yes or No

Rafael

To capture situational pro-Russians?

How much do you agree with each of the following statements:

Every effort should be made to prevent war. Environmental consequences should always be considered when making policy decisions. Governments should try to maintain access to existing energy sources.

OR – trade offs

Which of the following are more important policy goals for the EU (could do an experiment where respondents are shown a bunch of randomized trade-offs) Defend European nations from foreign military attacks OR maintain environmental protections OR maintain costs of cheap energy OR support efforts to take in immigrants and refugees.

Potential country budget? What percentage of your country's budget would you allocate to each of these policy issues:

Defence and Security XX% Environmental protections XX% Housing XX% Healthcare XX% Immigration and Refugees XX% Energy Independence XX% Public Debt XX% Natural Disaster Preparedness XX%
