Creating Group Variables Method 1

Pro Russian Long Term 0 - 6 scale

- Respondents gain 1 point if:
 - They do not think Russia is their countries greatest threat (Q68).
 - They think that Europeans should pursue trade and diplomacy with Russia (Q73).
 - They think their country spends too much on defence (Q69)
 - They do not support democracy ($Q5 < 5/10$)
 - They do not trust the European Union (New_Q43)

Histogram of EUI_data\$Pro_russia_scale

Pro Russian Short Term 0 - 7 scale

- Respondents gain 1 point if:
 - They do not think Russia is their countries greatest threat (Q68).
 - They think that Europeans should pursue trade and diplomacy with Russia (Q73).
 - They think their country spends too much on defence (Q69)
 - They do not support democracy ($Q5 < 5/10$)

- They do not trust the European Union (New_Q43)
- They do want Russia to gain territory in Ukraine (EUI_Ukraine_Outcome)
- They do not support Aid to Ukraine (New_Q78, less than 4 on a 0-9 scale)

Question: Q5 only captures ideological pro Russia not situational.

```

Russian Appeaser Long Term

0 - 6 scale

- Respondents gain 1 point if:
 - they think Russia is their country's greatest threat (Q68) or they think Nuclear proliferation is their greatest threat.
 - They want to trade with Russia (instead of invest in defence) (Q73)
 - They think their country spends too much on defence (Q69)
 - They oppose the creation of an integrated European army (Q70)
 - They think that NATO is not important for their country's defence (Q71)
 - They would vote to remain in the EU (Q9)

```

Testing Method 1 Variables

Correlations

First, I check the correlation of the pro-Russia and appease Russia scales to ensure they are capturing different concepts.

The long term scales

```
cor(EUI_data$Pro_russia_scale, EUI_data$appease_russia_scale, use = "complete.obs")
```

```
## [1] 0.2751372
```

The short term scales

```
cor(EUI_data$Pro_russia_scale_short, EUI_data$appease_russia_scale_short,
    use = "complete.obs")
```

```
## [1] 0.3461345
```

Both scales are weakly correlated at $r = 0.27$ and $r = 0.35$ respectively. Indicating that the scales are not highly collinear.

Over time distributions

Long term pro-Russia

```
