Method 1:

Group-Based Indices

Creating Group-Based Indices

Pro Russian Long Term

0 - 6 scale

Respondents gain 1 point if: - They do not think Russia is their countries greatest threat (Q68). - They think that Europeans should pursue trade and diplomacy with Russia (Q73). - They think their country spends too much on defence (Q69) - They do not support democracy ($Q5 < 5/10$) - They do not trust the European Union (New_Q43)

```
hist(EUI_data$Pro_russia_scale)
```

Pro Russian Short Term

0 - 7 scale

- Respondents gain 1 point if:
 - They do not think Russia is their countries greatest threat (Q68).
 - They think that Europeans should pursue trade and diplomacy with Russia (Q73).
 - They think their country spends too much on defence (Q69)
 - They do not support democracy ($Q5 < 5/10$)
 - They do not trust the European Union (New_Q43)
 - They do want Russia to gain territory in Ukraine (EUI_Ukraine_Outcome)
 - They do not support Aid to Ukraine (New_Q78, less than 4 on a 0-9 scale)

Question: Q5 only captures ideological pro Russia not situational.

```
hist(EUI_data$Pro_russia_scale_short)
```

Biggest Groups

Do not think Russia is the biggest threat

```
table(EUI_data$Q68 != 2)
```

```
##
## FALSE TRUE
## 41718 121406
```

Do not support high levels of aid

```
table(EUI_data$Aid_support < 4)
```

```
##
## FALSE TRUE
## 51274 111850
```

Russian Appeaser Long Term

0 - 6 scale

- Respondents gain 1 point if:
 - they think Russia is their country's greatest threat (Q68) or they think Nuclear proliferation is their greatest threat.
 - They want to trade with Russia (instead of invest in defence) (Q73)
 - They think their country spends too much on defence (Q69)
 - They oppose the creation of an integrated European army (Q70)
 - They think that NATO is not important for their country's defence (Q71)
 - They would vote to remain in the EU (Q9)

```
hist(EUI_data$appease_russia_scale)
```

Biggest groups

they think Russia is their country's greatest threat (Q68) or they think Nuclear proliferation is their greatest threat.

```
table(EUI_data$Q68 %in% c(2, 5))
```

```
##
## FALSE TRUE
## 106440 56684
```

They would vote to remain in the EU

```
table(EUI_data$Q9i == 1)
```

```
##
## FALSE TRUE
## 57186 82075
```

Russian Appeaser Short Term

Only post 2023

0 - 8 scale

Respondents gain 1 point if: - They do they think Russia is their country's greatest threat (Q68) - They want to trade with Russia (instead of invest in defence) (Q73) - Their country spends too much on defence (Q69) - They oppose the creation of an integrated European army (Q70) - They think that NATO is not important for their country's defence (Q71) - They would vote to remain in the EU (Q9) - Favour a return to

the territorial situation before the war (EUI_Ukraine_Outcome) - Support only compromises to end the war (New_Q78_variables)

```
hist(EUI_data$appease_russia_scale_short)
```

Testing Method 1 Variables

Correlations

First, I check the correlation of the pro-Russia and appease Russia scales to ensure they are capturing different concepts.

The long term scales

```
cor(EUI_data$Pro_russia_scale, EUI_data$appease_russia_scale, use = "complete.obs")
```

```
## [1] 0.2480931
```

The short term scales

```
cor(EUI_data$Pro_russia_scale_short, EUI_data$appease_russia_scale_short,
    use = "complete.obs")
```

```
## [1] 0.3300815
```

Both scales are weakly correlated at $r = 0.27$ and $r = 0.35$ respectively. Indicating that the scales are not highly collinear.

Method 2: Combined index

Generating combined index

Long term appeaser-supporter scale

0 - 7 scale

Respondents get 1 point if:

- They do not think Russia or nuclear non-proliferation is their countries greatest threat (Q68).
- They think that Europeans should pursue trade and diplomacy with Russia (Q73).
- They think their country spends too much on defence (Q69)
- They do not support democracy ($Q5 < 5/10$)
- They do not trust the European Union (New_Q43)

Respondents get 0.5 points if:

- Do not support an integrated European army (Q70).
- They do not think NATO is important to their country's defence (Q71).
- They would vote to remain in the EU (Q9)

```
hist(EUI_data$comb_scale)
```

Short term appeaser-supporter scale 0 - 9.5 scale

Respondents get 1 point if:

- They do not think Russia is their countries greatest threat (Q68).
- They think that Europeans should pursue trade and diplomacy with Russia (Q73).
- They think their country spends too much on defence (Q69)
- They do not support democracy ($Q5 < 5/10$)
- They do not trust the European Union (New_Q43)

Respondents get 0.5 points if:

- Do not support an integrated European army (Q70).
- They do not think NATO is important to their country's defence (Q71).
- They would vote to remain in the EU (Q9)
- They support a return to the pre 2022 status quo in Ukraine (EUI_Ukraine_Outcome).
- Support only compromises to end the war (New_Q78_variables)

```
hist(EUI_data$comb_scale_short)
```

Comparisons of measures

Create group variables

(Using Pro-Russia + Russia Appeaser scales:) Those who score 3 or less on both scales are considered pro-Europeans, those who score 4 or above on the Russian appeaser scale are considered Russian appeasers and those that score 4 or above on the Pro Russia scale are considered Pro-Russian.

```
EUI_data <- EUI_data %>%
  mutate(Russia_groups_long = case_when(appease_russia_scale < 4 & Pro_russia_scale < 4 ~ "Anti-Russia",
    appease_russia_scale > 3 ~ "Russia Appeaser",
    Pro_russia_scale > 3 ~ "Pro Russian"),
  Russia_groups_short = case_when(appease_russia_scale_short < 4 & Pro_russia_scale_short < 4 ~
    appease_russia_scale_short > 3 ~ "Russia Appeaser",
    Pro_russia_scale_short > 3 ~ "Pro Russian")
  )
```

Note: A similar grouping measure could be reconstructed with thresholds set on the combined index.

Groups over time

Long Term Variable

```
EUI_data %>%
  filter(Year > 2019) %>%
  group_by(Year, Russia_groups_long) %>%
  summarise(n = n(), .groups = "drop_last") %>%
  filter(!is.na(Russia_groups_long)) %>%
  mutate(Percentage = n / sum(n) * 100) %>%
  kable(digits = 2)
```

Year	Russia_groups_long	n	Percentage
2020	Anti-Russia	17380	88.53
2020	Pro Russian	540	2.75
2020	Russia Appeaser	1711	8.72
2021	Anti-Russia	17318	88.46
2021	Pro Russian	485	2.48
2021	Russia Appeaser	1775	9.07
2022	Anti-Russia	18475	88.33
2022	Pro Russian	455	2.18
2022	Russia Appeaser	1987	9.50
2023	Anti-Russia	17464	78.47
2023	Pro Russian	2687	12.07
2023	Russia Appeaser	2104	9.45
2024	Anti-Russia	12311	78.64
2024	Pro Russian	1932	12.34
2024	Russia Appeaser	1411	9.01
2025	Anti-Russia	22460	81.06
2025	Pro Russian	3650	13.17
2025	Russia Appeaser	1598	5.77

Short Term Variable

```
EUI_data %>%
  filter(Year > 2022) %>%
  group_by(Year, Russia_groups_short) %>%
  summarise(n = n(), .groups = "drop_last") %>%
  filter(!is.na(Russia_groups_short)) %>%
  mutate(Percentage = n / sum(n) * 100) %>%
  kable(digits = 2)
```

Year	Russia_groups_short	n	Percentage
2023	Anti-Russia	13430	60.12
2023	Pro Russian	2869	12.84
2023	Russia Appeaser	6039	27.03
2024	Anti-Russia	9105	56.24

Next steps

- Decide which measure to use for the groups.
- Decide what social medias we want to scrape to identify discourse surrounding the war in Ukraine.
 - We need API access for Meta.
 - We can then use BERTopic to identify themes in this corpus.

Dietlind's comments

- Too many unrelated components
- Left over group
- What are essential vars
-
